### Tribal Technology: Setting up for Sovereignty by Designing Statewide Systems for Tribal Nations

A traditional/contemporary presentation by Evans Craig starts out with a Traditional Blessing & a ‘dawning song’ on his traditional cedar flute. He follows that with a personal introduction, then compares the “Tribal Technology” that the urban Indians want, to the “Internet Technology” that the rural Indians want, making the technology ‘relevant’ to Tribal Leaders and then goes on to present a Tribal Vision through current online research, to obtain Tribal Goals of;

#### 1) Self-Governance, 2) Self-Sustainment, & 3) Sovereignty.

Evans presents and browses online through collaborating Tribes, such as the Pueblo Nations, 18 New Mexico Tribes and the Tribal Digital Village, 19 California Tribes, to experience Sovereign Tribal Network These design concepts come directly from the collaborating Tribes being utilized. He shows how Tribal Vision happens through;

1. **Self Governance** of *Tribal Networks* (Santa Ana Pueblo at [www.santaana.org](http://www.santaana.org) ),
2. **Self Sustainment** through *Tribal Education* (Kumeyaay Community College Online at [www.KumeyaayCommunityCollege.com](http://www.KumeyaayCommunityCollege.com) & *Tribal Businesses* (First Nations Café at [www.FirstNationsCafe.net](http://www.FirstNationsCafe.net) ) through
3. **Sovereignty**, by owning it all! (Sovereign Tribal Network Design at [www.internettechnologyservice.net/What\\_s\\_New/PuebloNations-EXEC.htm](http://www.internettechnologyservice.net/What_s_New/PuebloNations-EXEC.htm) )
